

How It Works

Society Maintenance Tracker

Read this once before you open the live link. It takes 2 minutes and tells you exactly what will happen.

Step 1: Create an Account

When you open the app, you'll see a **Create Account** option. Click it. You'll be asked to choose who you are:

- **Society Owner** — you manage a society/building
- **Resident** — you live in a flat and want to join a society that's already set up

Pick the one that matches you.

Step 2A: If you chose "Society Owner"

You'll fill in a few details about your society:

- Society Name
- Address
- Street
- Number of Floors

Click **Submit**.

As soon as you submit, the app instantly creates your **Society ID** (a unique code/link).

You'll also need to **add at least one flat** to your society (flat number, floor, etc.) — this sets up your building structure.

Now share your Society ID: copy your Society ID and send it to your residents (WhatsApp, email, whatever's easiest). This ID is what lets them join your society specifically — no one else's.

Step 2B: If you chose "Resident"

You'll be asked to **paste the Society ID** that your society owner shared with you.

Once you paste it, you're connected to the correct society. Then you'll add your own details:

- Your flat number / floor
- Basic profile info

Click **Submit** and you're in.

Step 3: Dashboard

Once account setup is done (either as Owner or Resident), you land on your **Dashboard**. This is your home screen where you can:

- View / raise maintenance complaints
- Check notices posted by the society
- Track flat and payment-related details
- See updates relevant to your role

Owners see a management view (all flats, all residents, all complaints). Residents see their own flat's view (their complaints, notices, status updates).

Quick Summary

Role	What you do	What happens next
Society Owner	Enter society details (name, address, street, floors) → Submit	Society ID auto-generated → Add a flat → Share ID with residents → Dashboard
Resident	Paste Society ID → Add flat details → Submit	Connected to your society → Dashboard (your flat's view)

That's it — now you're ready to try the live demo.
